An Audubon naturalist visited our class.

We learned about insects!

An insect has 3 body parts called head, thorax, and abdomen.

An insect has 6 legs attached to the thorax.

An insect has 2 compound eyes and 2 antennae on its head.

Some insects have 2 wings. Some have 4.

Wings are attached to the thorax, too.

head

thorax

abdomen

Add legs, antennae,
compound eyes, wings, and
color to this insect!
